PULSE

PULSE: The Operator's AI Starter Guide

A practical introduction for hotel spas, gyms and clubs, clinics and country clubs who want AI to show up in the numbers, not just in the tech stack. Includes a self-check and ready-to-use prompts.

By Andy Hall, BSc, EMBA

The problem is process, not technology

Most wellness and hospitality businesses do not have an AI problem. They have a measurement and habit problem that AI makes more visible.

The pattern is familiar. A new tool is bought because a competitor has one, or because a supplier demo looked impressive. It is switched on, a few people try it, and then everyday pressures take over: a busy season, a key person leaves, the rota changes. Months later nobody can say whether revenue, margin, utilisation or retention actually moved.

The tools are rarely the weak link. What is usually missing is a clear commercial target, a named owner, a simple routine that keeps it going when people change, and a way to decide what deserves to be rolled out further.

How AI projects usually fade

This is a typical shape we see, not a measured statistic. Your own timeline may be faster or slower.

Day 7	Excitement. A tool is live and a handful of people are trying it. No one has agreed what success looks like.
Day 30	Early wins are anecdotal. Usage depends on one or two enthusiasts.
Day 90	The enthusiast is busy or has moved on. Usage drops. The original reason for buying it is hard to remember.
Day 180	The tool is still being paid for but sits in the background. Other sites never adopted it.
Day 365	Renewal time. Without numbers, the decision is made on gut feel, and the cycle often starts again with a different tool.

PULSE exists to break that cycle by putting the commercial number first and making each step earn the next.

The five PULSE phases

Each phase has one job. Here is the outcome you should expect from each, in plain terms.

P

Pinpoint

You leave with one commercial number that everyone agrees matters most right now, such as treatment room yield, spend per guest, membership churn or occupancy. Every AI idea from here on is judged against it.

U

Unlock

You have one real, measured improvement on that number in one site, with a clear before and after. Small and proven beats big and vague.

L

Lock in

The improvement keeps happening when people are busy, on holiday or have left. It belongs to the business, not to one enthusiast.

S

Scale

What worked in one site is working across your estate, and you can see clearly where it is landing and where it is stalling.

E

Embed

AI is part of how the business is run and decided, with senior ownership and the right systems and partners, so future choices start from evidence rather than hype.

Self-check: are you ready to get a return?

Answer honestly. If you are unsure on three or more, start with Pinpoint before buying anything new.

1. Can you name the one commercial number you most want AI to improve this quarter?
2. Do you know today's baseline for that number, by site?
3. Is there a named person responsible for the result, not just for the tool?
4. If your most enthusiastic user left tomorrow, would the new way of working continue?
5. Could you show a before and after for any AI tool you already pay for?
6. Do your teams know what guest or member data they must never paste into an AI tool?
7. Do you have a simple way to decide whether to roll something out to more sites, or stop it?
8. Will you review the number on a fixed rhythm, for example weekly, rather than only when renewals come up?

PULSE prompt guide

Good prompts are less about clever wording and more about giving the assistant what a new colleague would need. Use this five-part structure with any mainstream AI assistant.

Role	Who the assistant should act as. "You are an experienced spa operations manager."
Context	The facts about your business it needs. Type of site, size, season, what you have tried.
Task	Exactly what you want it to do, in one or two sentences.
Constraints	Limits and rules. Tone, length, budget, brand voice, what to avoid.
Output format	How you want the answer laid out. A table, five bullet points, an email, a checklist.

Replace anything in **[square brackets]** with your own details. If the answer is weak, add more context rather than rewording the task.

> **Data privacy first.** Never paste guest, member, patient or staff personal data into a public AI tool. That includes names, email addresses, phone numbers, health information and booking histories linked to a person. Remove or replace personal details before you upload a spreadsheet, use totals or anonymised IDs, and check your organisation's data policy and the tool's settings. If in doubt, leave it out.

Copy-paste prompts

1. Choose one commercial metric

PINPOINT

```
Role: You are a commercial adviser to [type of business, e.g. a hotel spa / a gym / an aesthetics clinic / a country club].
Context: We have [number] sites. Our main revenue lines are [list]. Our biggest frustrations right now are [list]. We are considering AI but have not agreed a target.
Task: Suggest 5 candidate commercial metrics we could focus on for the next 90 days, then recommend one.
Constraints: Each metric must be something we can measure from data we already hold, such as [booking system / PMS / membership software]. Plain English, no jargon.
Output format: A table with metric, why it matters, where the data comes from and how to calculate it, then a one-paragraph recommendation.
```

2. Find the baseline

PINPOINT

```
Role: You are a data analyst for a [type of business].
Context: I will paste an anonymised export with these columns: [list columns]. It covers [date range] for [site name or "Site A"].
Task: Calculate the current baseline for [chosen metric], and show it by [week / month / site / day of week].
Constraints: Explain every calculation so I can check it. Flag any gaps or odd values instead of guessing.
Output format: A short summary, a table of results and a list of data issues to fix.
```

3. Treatment room utilisation

UNLOCK

```
Role: You are a spa revenue manager.
Context: Attached is an anonymised export of treatment bookings with columns [date, time, room, treatment, duration, price, therapist ID]. We have [number] rooms open [opening hours].
Task: Work out utilisation by room, day and hour. Identify the three biggest gaps and suggest practical ways to fill them.
Constraints: Ideas must fit our brand as [describe brand] and be testable in one site within 30 days.
Output format: A utilisation table, a heatmap-style summary in text, then three ideas with how we would measure each.
```

4. Class attendance and timetable

UNLOCK

```
Role: You are a gym and club programming manager.
Context: Attached is an anonymised export of class bookings and attendance with columns [class, instructor ID, date, time, capacity, booked, attended].
Task: Find classes with low fill or high no-shows and suggest timetable changes that could lift attendance.
Constraints: Keep total instructor hours roughly the same. Do not suggest removing more than [number] classes.
Output format: A table of the weakest and strongest slots, then a proposed change list with expected effect and how to measure it.
```

5. Churn win-back message

UNLOCK

Role: You are a member experience lead at [club or gym name].
Context: Members who cancel usually say [common reasons]. We can offer [what you can genuinely offer, e.g. a free session, a freeze option, a programme review].
Task: Draft a short, warm win-back email and a matching text message for members who cancelled in the last [number] days.
Constraints: British English, friendly and human, no pressure, no discounts unless I list them, under [number] words. Use [first name] as a placeholder only.
Output format: Email subject line, email body, text message, plus two alternative subject lines to test.

6. Clinic follow-up and rebooking

UNLOCK

Role: You are a patient experience manager at a [type of clinic].
Context: After [treatment type], clients should usually return in [timeframe]. Many do not rebook.
Task: Draft a gentle follow-up sequence of two messages to encourage rebooking at the right time.
Constraints: Professional and caring tone, no medical claims, include a line inviting questions, follow [regulator or internal] guidance on marketing.
Output format: Message 1 and Message 2 with suggested timing and subject lines.

7. Staff SOP so the win survives turnover

LOCK IN

Role: You are an operations trainer for a [type of business].
Context: We improved [metric] by changing [what you changed]. It currently depends on [person or role].
Task: Write a one-page standard operating procedure so any trained team member can repeat it.
Constraints: Simple language, numbered steps, include who does what and when, how to check it is working and what to do if it is not.
Output format: Title, purpose, steps, weekly check, common mistakes, and a five-question quiz for new starters.

8. Weekly check-in on the number

LOCK IN

```
Role: You are a general manager running a short weekly performance huddle.
Context: Our focus metric is [metric]. This week it was [value], last week [value], target [value].
Notes from the team: [notes].
Task: Write a 10-minute huddle agenda and three questions to ask the team.
Constraints: Positive, practical, focused on actions for next week.
Output format: Agenda with timings, three questions, and a one-line summary I can share afterwards.
```

9. Rollout checklist across sites

SCALE

```
Role: You are a multi-site operations director.
Context: A change that improved [metric] at [pilot site] is ready to roll out to [number] other
sites. Sites differ in [size, systems, staffing].
Task: Create a rollout checklist and a simple order of sites to go first, second and third.
Constraints: Each site must record its baseline before starting. Include what to check after 2, 6 and
12 weeks.
Output format: A checklist table with owner, due date and done columns, plus a short rollout plan.
```

10. Board or owner update

EMBED

```
Role: You are a commercial director writing for owners or a board.
Context: Over [period] we focused AI efforts on [metric]. Results by site: [summary]. Costs:
[summary]. What did not work: [summary].
Task: Write a one-page update that explains results, lessons and what we propose next.
Constraints: Factual, no hype, separate proven results from early signals, end with a clear decision
request.
Output format: Headline, three key results, lessons, proposal, decision needed.
```

Where to go next

If this guide has raised more questions than answers, that is normal. Most operators get stuck on choosing the number and keeping the change going, not on the technology.

Take the free AI Readiness Score

A short assessment that shows how ready your business is to get value from AI, with practical next steps. Free, at **wellnessgenius.co.uk/ai-readiness**.
